OBJECTIVE

Penetration Tester and VAPT Intern with hands-on experience in live cybersecurity operations, vulnerability assessment, and incident response. Proficient in OWASP Top 10 testing, web application penetration testing, and network vulnerability scanning using Nmap, Burp Suite, Metasploit, and Kali Linux. Experienced in reconnaissance, exploitation, post exploitation, and CVE based risk analysis with a strong focus on identifying and remediating security weaknesses in real world environments.

EDUCATION

Bachelor of Technology, Gulzar Group of Institutes
Major: Computer Science and Engineering

Expected 2026

Senior Secondary (10+2), Dayal Public School
PSEB Board

2021 – 2022

Matriculation (Class 10), Dayal Public School
PSEB Board

2019 – 2020

CERTIFICATIONS

Cybersecurity Virtual Internship	Palo Alto Networks (EduSkills)
Cyber Job Simulation	Deloitte Australia (Forage)
Cybersecurity Analyst Simulation	Tata Consultancy Services (Forage)
Cybersecurity Job Simulation	Mastercard (Forage)
Ethical Hacking Essentials	EC-Council

SKILLS

Programming and Scripting	Python, Bash, C++, JavaScript
Web Technologies	HTTP, HTTPS, HTML, CSS, SQL, JavaScript, ReactJS, FastAPI
Penetration Testing Tools	Nmap, Burp Suite, Metasploit, Wireshark, Nikto, Gobuster, Hydra, SQLmap
Security and Networking	TCP/IP, VPNs, firewalls, IDS, vulnerability scanning, reconnaissance
Operating Systems	Windows, Kali Linux
Soft Skills	Problem Solving, Analytical Thinking, Team Collaboration, Communication

EXPERIENCE

Cybersecurity Intern
Ansh InfoTech

Jan 2026 – Present
On-site, Ludhiana

- Conducting vulnerability assessments and web application penetration testing on live systems and internal applications.
- Performing network vulnerability scanning and reconnaissance to identify exposed services and misconfigurations.
- Analyzing system, application, and security logs to detect suspicious behavior and potential security incidents.
- Assisting in incident response, documenting CVE based findings, and supporting remediation and patching activities.
- Working with industry standard security tools to improve overall security posture and reduce organizational risk.

- Studied enterprise firewall configuration, network segmentation, and Zero Trust security architecture.
- Monitored network traffic and security events using industry grade security platforms.
- Gained hands on exposure to threat detection, logging, and security operations workflows.

PROJECTS

VulnForge – Autonomous Penetration Testing Platform

Developed an AI-augmented full-stack security platform using ReactJS, FastAPI, and MongoDB to automate reconnaissance and vulnerability scanning. Integrated OSINT tools (Nmap, Nuclei, Shodan) and Cloudflare's Llama-3 AI to analyze findings, map them to OWASP Top 10, and dynamically generate enterprise-grade PDF security reports. Built a client-side Crypto Lab for local data encoding and hashing.

Phishing Website Detection – Machine Learning Classifier

Built a phishing detection system using Python and XGBoost achieving 96.68 percent accuracy. Engineered a real time feature extractor to analyze 87 URL and content attributes. Validated the model with 96.19 percent precision to reduce false positives in live URL analysis.

WanderChat – AI Powered Travel Itinerary Generator

Developed a web application using ReactJS, FastAPI, and the Gemini API to generate personalized travel itineraries from natural language input. Over 100 users tested the platform with strong feedback on accuracy and usability.

PROFESSIONAL DEVELOPMENT AND ACTIVITIES

- Practiced Capture The Flag challenges on TryHackMe and Hack The Box to sharpen penetration testing and exploitation skills.
- Completed cybersecurity simulations from Deloitte, Mastercard, Palo Alto Networks, and Tata Consultancy Services.
- Maintained security testing scripts and penetration testing projects on GitHub focused on web application security.
- Attended webinars on ethical hacking, network security, and digital forensics.
- Regularly followed vulnerability disclosures, CVE feeds, and cybersecurity research blogs.
